

FBML/HTML Custom Tabs for your Business Page

Newly created business pages may not have the FBML App available. Facebook changes constantly.

Search for "HTML" and you will find several apps which will allow you to add more tabs and custom pages with html/fbml code. Choose one, you will be prompted to return to your personal profile, once you agree/continue you can then add the app to your business page/s. Go to your Business page, click edit page, go to the Apps tab and you should be able to edit the name of your new tab and also add html/fbml to the tab to create your page.
